## IST National Workshop Empowers Female Educators to Lead the Green Transition

Empowering female educators to teach and inspire for sustainability was the rationale behind a national workshop hosted by the Instituto Superior Técnico (IST), also known as the University of Lisbon. Held on 17 October 2025, the event aimed to help female educators develop skills and knowledge in teaching, learning and assessment methods that support green transition.

The workshop brought together 10 participants who engaged in lively discussions on ANGIE project results, including the ANGIE Graduate Study Programme curriculum. Prof. Inês Pires from IST opened the session with a warm welcome and an overview of the project, key achievements, and ongoing activities designed to strengthen academic and professional capacity-building for green transition.

The event aligned with broader mission of ANGIE to create and disseminate knowledge, methods, and technical solutions that support the transition to a green society, particularly across the WATERIC sectors (Waste management, Agriculture, Transportation, Energy, Residential, Industrial, and Construction). By focusing on female educators, the workshop contributed to building the competencies needed to train future specialists equipped for a sustainable future.

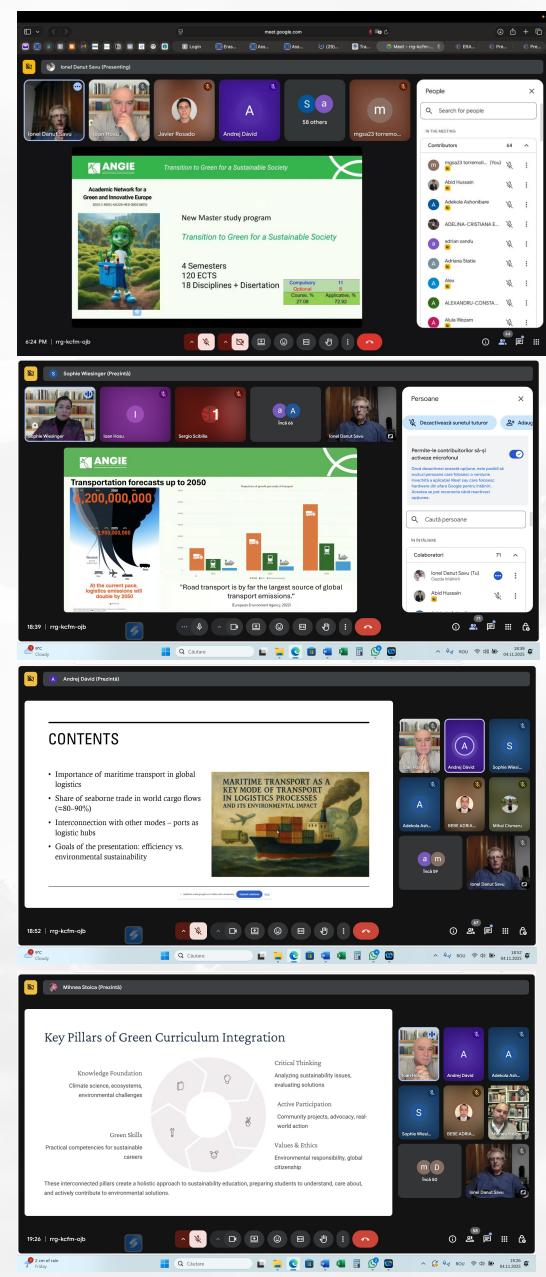

## Producing Sustainability Through Education: Logistics and Environment

How can the wheels of logistics and transport turn toward a sustainable Europe? That question steered the second webinar in the ANGIE series *Producing Sustainability Through Education: Logistics and Environment*, held on November 4, 2025.

Sixty-eight participants from academia, research centers, and companies working in the WATERIC sectors, joined the session to reimagine supply chains and discuss how education can lead green transition.

The webinar kicked off with Prof. Ionel-Dănuț Savu (University of Craiova), who unveiled the ANGIE Master Programme, designed to forge the next generation of specialists in sustainable transformation. MMag. Sophie Wiesinger (University of Applied Sciences Upper Austria) discussed sustainable multimodal transportation, exploring innovative strategies to drastically reduce the environmental impact across various modes of travel. The focus shifted to the maritime world as Prof. Andrej David (University of Žilina) analyzed the environmental footprint of sea transport and its crucial role within global logistics networks. Next, Prof. Ioan Hosu (Babeș-Bolyai University) in his presentation, emphasized the need of integrating the European Green Agenda into education to ensure sustainability is fundamentally embedded in all teaching and learning.

The webinar presented a multi-layered roadmap, cementing logistics and education as essential forces in accelerating Europe's green transition, and reflecting ANGIE's commitment to linking knowledge, practice, and innovation.

## Women Leading the Green Transition: Workshop on Green Deal and Gender

Cluj-Napoca, October 23, 2025 – Babeş-Bolyai University (UBB) recently hosted an inspiring workshop on “Green Deal & Gender,” held under the ANGIE Project and co-funded by the Erasmus+ Programme of the European Union.

The event brought together thirteen female educators from UBB to explore how gender equality and the European Green Deal intersect. Through lively discussions, participants reflected on the crucial role women play in driving sustainability, inclusive innovation, and climate education. They exchanged practical ideas for integrating gender-responsive perspectives into environmental teaching, policymaking, and community initiatives.

More than a workshop, the event created a space for connection and collaboration. Participants left energized, motivated to keep working together on initiatives that strengthen both gender equity and the green transition.
