ANGIE

ACADEMIC NETWORK FOR A GREEN & INNOVATIVE EUROPE

Doc. code: *UCV-Dis-10-ver#1*

Date: 31.07.2025

Ref. to: Agenda for webinar

Platform: Webex

WEBINAR: *WELDING AND SUSTAINABILITY*

Agenda

July 31, 2025

15:00 – 16:00	ANGIE project – description (I.D. Savu and M. Florescu)
16:00 – 16:30	Sustainability in industry – general aspects and examples (M. Florescu)
16:30 - 17:00	Discussions
17:00 – 17:30	Analysis of interaction between a welding process and sustainability (I.D. Savu)
17:30 - 18:00	Discussions
18:00 - 18:30	Sustainability in a shipyard (I.D. Savu)
18:30 - 19:00	Discussions
19:00 – 19:15	Conclusions and closure of meeting

Report

On July 31, 2025, the webinar entitled "Welding and Sustainability" was organized, with the participation of experts and stakeholders from member companies of the Romanian Welding Society (ASR). This association was chosen for two reasons:

1. it is made up of the main actors operating with welding and soldering works in Romania

2. the welding process is known to be one of the most polluting industrial manufacturing processes.

The invitation was sent through the ASR secretariat to the association members in three ways: by email, through the association's official newsletter and by posting on the association's website.

The topic of discussion was chosen by the organizer, the University of Craiova, and the content was established in agreement with the ASR.

The moderators of the webinar were Mihaela Florescu and Ionel-Dănuț Savu, both teaching staff at the University of Craiova, so there was a 50% female participation in the implementation of the activity.

The webinar started with a detailed presentation of the ANGIE project. For almost one hour the moderators presented the scope, the objectives, the activities and the main results of the project. The curriculum produced within the WP2 was presented and analysed with the participants.

The first topic, “Sustainability in industry – general aspects and examples” was presented and moderated by M. Florescu and focused on the five components of the concept of sustainability: environmental, business, social, strategic and institutional.

The second topic was related to the interaction between the concepts of WELDING and SUSTAINABILITY: “Analysis of interaction between a welding process and sustainability” and was presented and moderated by I.D. Savu.

And the last topic of discussion, “Sustainability in a shipyard” was also moderated by I.D. Savu, given the practical experience he has with three shipyards in Romania.

The webinar was attended by 18 specialists (including 6 women, so 30%), the discussions exceeding the established time frame, so the webinar closed after 8:30 p.m.

Webinar ASR - Sudare și sustenabilitate
Drumul către sustenabilitate
ASR
Raportările ESG și GES
SWOT
Puncte tari:
• Eficiență energetică îmbunătățită
• Reducerea emisiilor de CO_2
• Imagine pozitivă în fața clienților și partenerilor
Puncte slabe:
• Investiție inițială ridicată
• Necesitatea de instruire a personalului
• Timp de tranziție operațională
Oportunități:
• Acces la fonduri verzi și subvenții
• Alinierea la reglementările UE privind sustenabilitatea
• Extinderea pe piețe eco-sensibile
Amenințări:
• Ritmul lent de adaptare în industrie
• Fluctuația prețurilor la echipamente sustenabile
• Posibile rezistențe interne la schimbare
